12	L12	<p>"PROBLEM the INVENTION SOLVES - WORD/SYNONYM SEARCH.:" "Quotation from the specification: However, these devices from the prior art have a few disadvantages. For example, it is complicated to adapt a transport path of one such device to the transpod path of another device if these flat materials will be accepted directly from the upstream device in a so-called "inline" processing. This generally requires a complete remodeling of the entire transport path if the two devices were not already tuned to each other. Therefore,if devices produced by different manufacturers are used, this problem occurs frequently, at the latest during a change in configuration. In a few of the devices from the prior art, guiding surfaces are provided that are connected rigidly on one side to the housing of the device for handling flat materials. This has a negative effect on the paper guiding, among other things because of manufacturing and assembly tolerances, which make complicated calibrations necessary. Therefore, it would be desirable to provide a device for guiding flat materials that permits secure and precise transport of flat materials between modules of a device for handling flat materials and does not have the disadvantages described above.:"</p>	0	<p>US-PGPUB; USPAT; USOCR; EPO; JPO; DERWENT; IBM_TDB</p>
